

The Le Restaurant Français has 16 tables that can each seat 4 people. In the middle of each table is a flower vase with 3 pink lilies. Every Thursday, Chef Willie always buys new lilies for each table. Each one cost \$1.50 at Ben's Flower Shop, which is located at 1692 Sycamore Street. The restaurant is almost always full and he cooks approximately 50 meals an evening. On Saturday, Chef Willie went to Ben's Flower Shop. How many lilies did he purchase?

0, because it is Saturday not Thursday.

Below is the recipe for Chef Willie's famous chocolate chip cookies:

- | | |
|------------------------------|-------------------------|
| <i>1/2 tsp. baking soda</i> | <i>1/2 tsp. salt</i> |
| <i>1/2 cup butter</i> | <i>1 cup flour</i> |
| <i>1/3 cup brown sugar</i> | <i>1/3 cup sugar</i> |
| <i>1 egg</i> | <i>1/2 tsp. vanilla</i> |
| <i>1 cup chocolate chips</i> | |

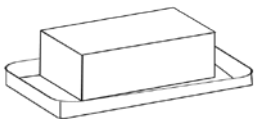

The recipe above makes 3 dozen cookies, but tonight he is hosting a boy's birthday party and needs to bake 10 dozen cookies. How many cups of flour will he need to use?

3 1/3 cups of flour

Chef Willie is making pancakes. They require one cup of milk but he cannot find his measuring cups and does not want to make an estimate. He has two empty containers in front of him. One container can hold 3 cups and the other can hold five cups. How can he quickly measure exactly one cup using these two containers?

He can fill the 3 cup container and then pour it into the 5 cup container. If her repeats the same process, he will only be able to pour 2 cups into the 5 cup container ($3+2=5$) leaving exactly 1 cup in the 3 cup container.

Chef Willie has a 32 tablespoon rectangular shape block of butter, but only needs 8 tablespoons for his mouth watering strawberry cupcakes. Use the rectangle to show the quickest way to measure 8 tablespoons of butter.

8 tablespoons	8 tablespoons
8 tablespoons	8 tablespoons
